

FAQ-But Haskell is scary!

**Q:** Is Lamdu similar to Haskell? That's an unusual niche language which is, honestly, a bit scary..

**A:**

Yes, Lamdu's language has similarities to Haskell, but Lamdu solves its major pain points!

- Continuous evaluation makes high abstraction levels concrete
- Type mismatches are much simpler with better blame assignment
- Explicit laziness yields a simpler execution model
- Friendly syntax and discoverable editing

# FAQ - Similar Projects

**Q:** Yet another futuristic programming environment?  
Why not Greenfoot/Luna/etc.?

**A:**

Lamdu is different. We feel that nobody else is exploring the same point in the design space:

- Luna is a visual programming language. This is an interesting field to explore, but Lamdu is an exploration of structural programming.
- Greenfoot is for Java, which makes for some very important differences.
